

## Course Calendar

| Week | Dates     | Topic                                                                                               | Day 1                                                             | Day 2                                                                                 | Day 3                                                                                                         |
|------|-----------|-----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 1    | 3/24/2025 | GitHub                                                                                              | No Class                                                          | Survey, Setup PyCharm, Begin git. Branching. Day 1                                    | git: commits, branches, pull-requests, working as a team, \ begin first git projects \ Day 2 (Day 1 Hartford) |
| 2    | 3/31/2025 | <i>Special Schedule</i><br>Introduction to OOP                                                      | Day 3 Introduction to OOP. Classes, Instances, <b>init</b> , self | Day 4 More with OOP. Creating Subclasses. <b>NO HW Due</b>                            | <b>Spring Visits</b> NEDCMP (No Class)                                                                        |
| 3    | 4/7/2025  | <i>Special Schedule</i><br>Merging and Subclasses ROMI Driving                                      | Day 5 Merging Subclassing                                         | Day 6 Introduction to robot code. AutoInit, AutoPeriodic, Teleop Init Teleop Periodic | Day 7 Get ROMI Driving without Subsystems                                                                     |
| 4    | 4/14/2025 | Review and Test                                                                                     | Day 8 Review for Test 1 <b>NO HW Due</b>                          | Day 9 Test 1                                                                          | <b>(WORLDS) (No Class)</b>                                                                                    |
| 5    | 4/21/2025 | Encoders                                                                                            | Day 10 Intro to the Encoders <b>NO HW Due</b>                     | Day 11 Intro Commands and Subsystems                                                  | <b>NO CLASS: Long Weekend</b>                                                                                 |
| 6    | 4/28/2025 | <i>Special Schedule</i><br><b>Midterms</b><br><b>Wednesday</b><br><b>11:30 pm</b><br>Drive Straight | Day 12 Drive Straight <b>No Major Assignments</b>                 | Day 13 Drive Straight and Finish                                                      | Day 14 Commands and Subsystems / Refactor DriveStright to Command                                             |
| 7    | 5/5/2025  | Unit Testing                                                                                        | Day 15 Unit Testing/MonkeyPatching                                | Day 16 Drive to Turn/Gyro/Command                                                     | Day 17                                                                                                        |

| Week | Dates     | Topic                                                  | Day 1                                        | Day 2                               | Day 3                                      |
|------|-----------|--------------------------------------------------------|----------------------------------------------|-------------------------------------|--------------------------------------------|
| 8    | 5/12/2025 | Feed Forward and PID Control                           | Day 18 Control Theory SysId and feed forward | Day 19 Control Theory 1 PID Control | Day 20 PID Control Drive to Distance       |
| 9    | 5/19/2025 | Gyro and Program Flow                                  | Day 21 Gyro Intro                            | Day 22 Drive to Turn                | Day 23 Advanced Presentations              |
| 10   | 5/26/2025 | Final Project                                          | Day 24 Work on Final Project                 | Day 25 Work on Final Project        | <b>NO CLASS: Prize Day</b>                 |
| 11   | 6/2/2025  | Final Project Presentations<br><i>Special Schedule</i> | <b>NO CLASS</b>                              | <b>NO CLASS</b>                     | <b>TEE Thursday AM Final Project Demos</b> |

Introduction to Robot code (Timed Robot)
